

CASE STUDY:

EMERGENCY SERVICES TRAINING INSTITUTE

Wall-mounted secure storage systems for tomorrow's first responders.

[1.0] PROJECT OVERVIEW

A large public-safety officer training facility contacted Dasco for help storing their training pistols. Our storage specialist took the time to understand the educational institution's needs and worked with the client to develop an appropriate solution – sending engineering drawings, renditions and expert advice. Their solution arrived ready for installation. Our team carefully mounted the product in the desired location.

[2.0] THE STORAGE REQUIREMENTS

Our client needed to store 96 handguns and set aside an 11 ft. by 9 ft. wall in a room for storage. The training institute specified the need for our most slender solution, so the room could effectively double as a classroom. Another requirement was all the storage spaces needed to have combination locks. Due to the high rate of student turnover from program to program, keys would often be lost or damaged which created logistical issues.

[3.0] DASCO'S STORAGE SOLUTION

We recommended 24 of our wall-mountable, 4-Compartment Sidearm Towers (4x1 configuration). These lockers feature 4 individually-locking compartments that we equipped with 3-digit combination locks for each student. This solution has minimal impact on the space in the classroom and allows the educators to reset the combination locks for the next set of students after the program has been completed.
