

Case Study

Telus World of Science - Edmonton, AB

The TELUS World of Science, in Edmonton, Alta is a multi discipline learning centre featuring several themed learning galleries, a planetarium, an IMAX theatre as well as unique visiting exhibits. The facility caters to children of all ages and adults alike with their creative presentations and exhibits. One such exhibit is the “Science Garage”, a hands on centre which features a climbing wall, wind tunnels, an interactive dance floor and a Science Workshop.

Dan Alfano, Manager of the Science Garage along with the rest of his team, set out to upgrade to their Workshop with specific type of product in mind. Dan’s purchasing team introduced him to the team at Waymarc to find solutions to their unique needs. “We needed products that were durable, easily secured for safety reasons and painted with bright colours to meet the unique aesthetic needs of our space. Waymarc provided a solution that fully met our needs and more!”, said Dan.

Waymarc started by showing samples of the colours and recommended Rousseau Metal, because of the quality and durability of their products. They then showed the options that were available to us during the design phase of the space, creating drawings and layouts to ensure that everything would fit where it was supposed to. “Overall, said Dan, “the team at Waymarc listened to our needs and made sure that we were happy with our choices before any product arrived. Their installation team was fantastic and they built it exactly as it was planned.”

From top: Something for everyone at the Science Garage, A group of kids getting their groove on!

The Science Garage team hard at work

Bold, bright colours are inviting to kids of all ages

“We needed products that were durable, easily secured for safety reasons and painted with bright colours to meet the unique aesthetic needs of our space. Waymarc provided a solution that fully met our needs and more!”

Durable work tables able to stand up to any project

The Science Garage employees appreciate the small details Waymarc put into the design. All of the cabinets are able to be locked and are keyed alike, making security of materials convenient and consistent. The cabinets and mobile drawer systems keep a wide variety of materials organized and close at hand. The bold colours are eye-catching and meet the aesthetic design for the space. The durable powder coat finish ensures that the look will last for many years.

When asked if he would recommend Waymarc to others, Dan said, “Absolutely! In fact, we are often asked where we sourced the workbenches and cabinets, and we are proud to show off the quality systems provided by Waymarc.”

Tables and toolboxes on locking castors allow them to be moved wherever needed and nested under work surfaces to maximize space.
